

KIDS' EAT 'N RUN DINNERWARE AND PLACEMATS

The whole idea of creating this line was to make mealtime fun time. The dishes keep the child's interest at the dinner table.

The Aeroplane propeller spins and the Race Car's wheels turn without the car moving because the body sits directly on the table.

We get letters from mothers thanking us for helping to make mealtime an enjoyable experience.

Product is made of high impact ABS plastic and Polypropylene plastic. ABS plastic is what your telephone is made of.

Product is FDA tested and approved.

It is dishwasher safe (top rack) and microwaveable.

Most children do not like it when their food runs together. For that reason we have separate compartments in the dishes.

Psychologically it makes children feel special. They are not eating on "baby plates". They know their dinnerware was specially made for them to enjoy.

It's surprising how children will eat foods that they normally wouldn't eat just because they are served in these fun dishes.

The cup has a spill proof lid, which can be discarded when the child gets older.

Little children, with their tiny hands, can grab onto the easy to hold flatware with their thumb and forefinger and hold it securely.

After the meal is over, Mom can put the set in the dishwasher and then the kid's can play with it because it is also a toy.

We recommend the dishes from ages 1 to 8.

Some people even put the dishes on the coffee table and put candy and other goodies in them.
